Fixing agent
WF-4314N

Chemical Structure

Recombinant of surfactants and polymer macromolecules

Technical Index

Item	Standard
Appearance	Yellow transparent liquid
Solid Content, %	49.0-51.0%
PH Value (1% water solution)	4.0-6.0
Ionic	Cationic/Nonionic

Features and Advantages

1. It can effectively enhance the wet rubbing fastness of fabrics, including washing resistance, sweat resistance, and high-temperature water blister resistance.
2. It has a wide color application range and significantly improves the color fastness of dyeing and printing fabrics for various color series of reactive dyes such as cyan, magenta, black, and bright cyan.
3. The color change is small and the fixation reproducibility is good.
4. It does not affect the hand feel of the dyed fabric or the water absorption property of the fabric.
5. It does not contain free formaldehyde or bound formaldehyde.

Application

It improves the color fastness of various cotton product types during dyeing or printing, and is particularly suitable for solid-color treatment of fabrics with high fastness requirements.

1. Impregnation process: General dosage 0.2 - 1.0% (by weight)
   pH value 5 - 7
   Temperature 40℃ - 60℃
   Time 20 - 30 minutes
2. Wringing process: General dosage 1 - 5g/L

Package

120KG Plastic Drum or other packing on request. Sealed and light-proof storage.
